Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 /CLORE TIDE TABLESHOLIS.
//CLORE TOTAL THE POLY (A) + RNA was dephosphorylated with bacteral alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (BAP) and then decapped intext mana was ligated with DNA-RNA linker including ECOR is to by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with B. coll DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli TOPOLY, by electroporation method. The CDNA libraries constructed by this method are full-length enriched CDNA library."

(Pharmacia) with a modified polylinker; Site 1: ECOR I; Site_2: Not I; NCI CGAP_ED1 is a normalized CDNA library containing the following tissue(8): Chondrosarcoma cell line CS5. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded CDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonalectide used to prime the synthesis of first-strand CDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GCTCAAGGCT.

Pharmacology, Harvard Institute of Proteomics, 320 Charles St.,
Cambridge, Ma 0141-2023, USA

This CDS clone is a part of a collection of human full-length
Cxpression clones generated by Harvard Institute of Proteomics.

Bach CDS has been cloned without stop-codon (to allow fusion with
C-terminal tag). The CDS has been directionally cloned using BD
In-Fusion(TW) cloning system between the Sall and Hindill sites of
the pDNR-Dual vector. Additional sequences in the clone: 'ACC'
after Sall site and before 'ATG' to provide Kozak consensus
sequence; 'GG' after last codon and before Hindill site to maintain

AF027706 2501 bp mRNA linear PRI 10-5EP-1998
Homo sapiens serine/threonine kinase RICK (RICK) mRNA, complete
 Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mamalia; Butheria; Primates; Catarrhini; Hominidae; Homo.

1 (bases 1 to 2501)

Inohara,N., del Peso,L., Koseki,T., Chen,S. and Nunez,G.
RICK, a novel protein kinase containing a caspase recruitment domain, interacts with CLARP and regulates CD95-mediated apoptosis 98241596
 9575181

2 (Dasses 1 to 2501)

Inohara, N., Koseki, T., Chen, S., del Peso, L. and Nunez, G.

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful been determined. Primers for synthesising the full length cDNA are useful length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly

 AAZ46138-Z46168 encode human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP

 ABDTYrGluLeuValSerThrLygProThrArgThrSerLygValArgGlnLeuLeuAsp 184
 New B1 protein regulates cell death and cell survival pathways -derivatives, DNA and antibodies, also regulate intracellular inflammation; for treating AIDS, cancer.
 This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above

 The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, Nck-Interacting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present nucleic acid sequence encodes the human cellular kinase RICK

Claim 8; Fig 7b; 93pp; English

This sequence encodes the human RICK (RIP-like interacting CLARP kinase)

C protein of the invention. The RICK protein acts as a positive regulator

C dapoptosis, potentiating apoptosis induced by caspase-8 and caspase-10

during CD95 signalling. The invention provides methods for identifying

c during CD95 signalling pathway inhibitors and activators, and methods and

c compositions for screening compounds which will modulate the interactions

of the various compositions identified: ARC, RICK, and the CIDE family of

c activators (CIDE-A, CIDE-B and DREF-1). RICK is useful in screening

assays for agents, useful in the diagnosis, prognosis or treatment of

disease associated with excess cell growth and dysregulation of

c apoptosis. Complexes containing RICK and CLARP can be used in drug

screening assays to identify inhibitor molecules blocking CD95-mediated

c apoptosis. Owerspression of ARC in an in vitro cell system can be used

ct oidentify inhibitors of the enzymatic activity of caspase-8.

C identification of ARC-like inhibitory compounds may be useful for gene

cut candiac disorders. Therapoutic compositions of CIDEs can be used to

c treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia,

c schaemic injury, and toxin-induced liver disease. AntiRICK antibodies

c can be used as reagents for the preparation or affinity chromatography

c media, and for diagnostically measuring RICK levels. A specific inhibitor

of an essential step in the biochemistry of apoptosis is needed. RICK

interaction with intracellular factors such as CLARP and FADD appears to

cancer associated gene; cancer antigen; detection; cancer;

AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the tissues and calls the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antidathmatic; antihenwmatic; antiharthritic; antidiffermatory; antihrorid; antiallergic; antibacterial; antiviral; cermatological; neuroprotective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antiangiogenic. The polynuclectides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynuclectides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune calls, to treat disorders of hematopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate
 1203 AAGTTACAGAGTGTTTCAAGTGCCATTCACCTATGTGACAAGAAAATGGAATTATCT 1262
 inflammation, cancers, cardiovascular disorders, neurological disease and absterial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of

The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, human CARD-4Z or murine CARD-4L (all splice variants of CARD-4)

Contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, human CARD-4Z or murine CARD-4D is an isolated fusion protein, comprising the colopypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide covalently linked by a peptide bond to a heterologous colopypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, conjecting clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic cell death corphylactic treatments (in diseases associated with apoptotic call death cimmunodeficiency syndrome), neurological disease (e.g. Alzheimer's disease, amyotrophic lateral sclerosis, retinitis disease, parkinson's disease, amyotrophic lateral aclerosis, retinitis conservation myocardial infarction and stroke). The CARD polypeptide is suseful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD proteins, which himson consumers and considered is a human constant and accepted and constant and accepted or constant and accepted or constant can be an human constant and constant sequence is a human constant constant and constant constant constant and constant constant constant constant constant constant constant constants.

This invention describes the isolation of novel human caspase recruitment domain, CARD-3 and CARD-4 polynucleotides and proteins and a partial murine CARD-4 protein and genes. The genes and proteins of the invention are involved in the regulation of caspase activation. The caspase creciniment domain (CARD) polynucleotides, polypeptides, homologues and are involved in the regulation of caspase activation. The caspase creciniment domain (CARD) polynucleotides, polypeptides, homologues and antibodies can be used in screening assays, detection assays, predictive methods may be used to diagnose and treat patients which are suffering (methods may be used to diagnose and treat patients which are suffering death, abnormal activity of the TMF receptor complex, or abnormal activity of the TMF receptor complex, or abnormal activity of the TMF receptor complex, or abnormal activity of the TMF receptor complex, or abnormal activity of a caspase.

Compounds, carcinomas associated with mutations in p53 and hormone-compendent tumours), autoimmune disorders (e.g. systemic lupus erythematosis, immune-mediated with mutations in p53 and hormone-compendent tumours), autoimmune disorders (e.g. systemic lupus cretinitis pigmentosa, sprinal muscular dystrophy, cerebellar degeneration, anaemia, myelodysplastic syndrome, mycoradial infarction, and stroke can emenia, myelodysplastic syndrome, mycoradial infarction, and stroke compounds which modulate their activity. The CARD-3 protein may also be used to for screen drugs or compounds which modulate their activity. The CARD-4 gene can express a campound which modulate their activity. The CARD-4 gene can express a campound which modulate their activity. The CARD-4 gene can express a campound which modulate their activity. The CARD-4 gene can express a campound which modulate their activity. The CARD-4 gene can express a campound to be used to compound which modulate their activity. The CARD-4 gene can express a campounder the human CARD-4 splice variants, CARD-4 and CARD-42. This sequence

 The present sequence is that of cDNA encoding human caspase recruitment domain 3 (CARD-3, see AAB20079). The CDNA was isolated following a database search using known CARD sequences. Plasmid pXEITA containing CARD-3 cDNA is deposited as ATCC 203037. CARD-3 is an intracellular protein predicted to be involved in regulating caspase activation. It is useful as a modulating agent in regulating cellular processes include cell growth and cell death. Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the tumour necrosis factor receptor complex, abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of a caspase involve administering a compound that modulates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6 e.g. a small molecule, antisense nucleic acid, ribozyme or polypeptide.
 204
 224
 Isolated intracellular proteins predicted to be involved in regulating caspase activation are used for diagnosis and treatment of e.g. cancer, viral infections, autoimmune diseases, neurological diseases and

 The invention relates to identifying (MI) a compound which modulates a human or murine caspase recruitment domain (CARD)-4L (long form) colypeptide with a test compound and determining the effect of the test compound on the activity of the catory peptide to identify a compound which binds to the LRR cleurine rich repeat) domain of CARD-4. Also included is a method of identifying a candidate compound to modulating LBR (leucine rich repeat) domain of CARD-4. Also included is a method of identifying a candidate compound for modulating LBS (lipopolysaccharide). Mediated activation of nuclear factor-kappa B (NF-kB), by providing a cell expressing a polypeptide comprising the LRR domain of CARD-4 and cativation, where altered NF-kB activation polypeptide in the presence of the test compound compared to the binding in the absence of the test compound indicates that the test compound is a candidate compound for modulating LBS-mediated activation of NF-kB. Modulators identified by compound indicates that the test compound is a candidate compound for modulating LBS-mediated activation of NF-kB. Modulators identified by compound indicates that the test compound is a candidate compound for modulating LBS-mediated activation of NF-kB. Modulators identified by infections autoimmune disorders such as cancer, viral compounds disorders such as cancer, viral compounds allergies, autoimmune disorders e.g. systemic lupus extythematosus.

CC infections, autoimmune disorders e.g. systemic lupus extythematosus.

CC infections, autoimmune disorders e.g. systemic lupus extythematosus.

CC aselma, allergy, psoriasis, conteact dermatitis, gastrointestinal and arburitis, astopic conditions such as allergies, insulin-dependent diabetes, bacterial infections, including the present sequence is the human cDNA encoding conditions.

The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (GARD)-4Y, human CARD-4Z or murine CARD-4E, (all splice variants of CARD-4) is contiguous amino acids of a human caspase recruitment domain (GARD)-4Y, polypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide covalently linked by a peptide bond to a heterologous colypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, controling clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic call death c.g. cancers, autoimmune disorders (e.g. systemic lupus erythematosus and immune related glomerulonephritis), viral infections, AIDS (acquired immunodeficiency syndrome), neurological disease (e.g. Alzheimer's disease, parkinson's disease, amyotrophic lateral sclerosis, retinitis pigmentosa, spinal muscular atrophy and cerebellar degeneration), haematological diseases (e.g. anaemia, neutropaenia and myelodysplastic syndromes), myocardial infaction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD correctins and cARD-1 is located on chromosome 7. The present sequence is a human CARD CDNA

This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RP2, RICK and CARDIAK) is known to be a mediator of p75 (a member of the tumour necrosis factor (TNF) family), and is believed to provide the switch for cell survival and cell death decisions mediated by this p75 neutrophin receptor. Accordingly these genes, and the proteins encoded thereof, are linked to certain disorders associated with an increased number of cells surviving and proliferating when apoptosis is inhibited. These include cancer, autoimmune disorders e.g. systemic lupus and immune mediated glomerulonophritis, viral infections such as those caused by the herpesvirus, neurological disorders such as Detecting compounds which alter binding of the caspase recruitment domain (CARD) of CARD-3 polypeptide to the neurotrophin receptor p75 is useful to provide compounds for treating CARD-3 mediated disorders. retinitis pigmentosa, haematologic diseases including chronic neutropenia, as well as myocardial infarction and strokes. The present invention further describes a novel method for determining whether a test compound alters the binding of CARD-3 to p75, which comprises measuring Disclosure; Fig 2; 40pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Homo sapiens BAC clone CTA-437L15 from 8q21, complete sequence. AC004003.1 GI:2772557 HTG.
 Washington
Missouri 63108, USA
 Washington
Missouri 63108, USA
 Direct Submission
Submitted (21-DEC-1999) Department of Genetics, Washington
University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
 Clone CTA-437115 is from a release of the human BAC library CTB-HS-A. The library contains cloned DNA from human sperm. See: Shiauya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). The clone is available from Research Genetics, Inc. (http://www.resgen.com).
 NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
 This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
 NEIGHBORING SEQUENCE INFORMATION:
the clone sequenced to the left is CTA-237G1. The actual start of
this clone is at base position 1 of CTA-437L15; actual end is at
116650 of CTA-437L15.
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

1 (bases 1 to 116650)
Ozersky, P., Holmes, A. and Broy, M.
The sequence of Homo sapiens BAC clone CTA-437L15
Unpublished
 MAPPING INFORMATION:
This chromosome 8 clone was provided by Dr. Patrick Concannon
(patcon@vmmc.org) at the Virginia Mason Research Institute.
 - Genome Center
Center: Washington University Genome Sequencing Center
 This clone contains STS HS275YF1 (NID:g1051703).

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

Submitted (04-NOV-2003) Genome Analysis, Institute of Molecular
Submitted (04-NOV-2003) Genome Analysis, Institute of Molecular
Biotechnology, Beutenbergstr. 11, Jena, Thuringia 07745, Germany
On Nov 4, 2003 This sequence version replaced gi:4151947.
 Neighboring sequence information:
This entry is part of a larger genomic contig. The start of this sequence is directed towards the centronere. The end (31818. .320187) of this sequence overlaps with the start of Acc number AF049895. It covers RGP-64M4, SCb-282k6, SCb-273G1 entirely and is overlapped by SCb-296N11, SCb-316M22.
 Platzer,M. and Varon,R.
Direct Submission
Submitted (30-DEC-1998) Genome Analysis, Institute of Molecular
Biotechnology, Beutenbergstrasse 11, Jena 07745, Germany
3 (bases 1 to 320187)
 Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

```
* NOTE: This record contains 67 individual

* sequencing reads that have not been assembled into

* contigg. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will
```

 Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LiNL at: http://image.llnl.gov Series: IRAD Plates 15 Row: n Column: 18 This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 20127435.
 Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,
Mammalia, Eutheria, Primates, Catarrhini, Hominidae, Homo.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

include: cytostatic; proliferative; vulnerary; immunomodulator;
antidiabetic; antiasthmatic; antirheumatic; antiarthritic;
antiinflammatory; antithyroid; antialregic; antibacterial; antiviral;
cdermatological; neuroprotective; cardiant; thrombolytic; coagulant;
cn octropic; vasotropic; antipsoriatic and antiangiogenic. The
cootropic; vasotropic; antipsoriatic and antiangiogenic. The
polynucleotides and polypeptides can be used for preventing, treating or
complicating medical conditions and diagnosing pathological conditions.
CP Polynucleotides, polypeptides, antibodies, agonists and antagonists from
the present invention may be used to treat immune disorders by activating
cc inhibiting the proliferation, differentiation or mobilisation of
immune cells, to treat disorders of haematopoietic cells, autoimmune
cdisorders, allergic reactions, graft versus host disease and organ
cejection, modulate haemostatic or thrombolytic activity, modulate
cc inflammation, cancers, cardiovascular disorders, neurological disease and
characterial or viral infections. The peptides, nucleotides, antibodies,
cc AACTBAST and AABA4240 represent sequences used in the exemplification of
the negative of the period of the complication of
the negative of the period of the complification of
the negative of the period of the complication of

 The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the callular kinases RICK, RIP, Nck-Interacting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present nucleic acid sequence encodes the human cellular kinase RICK

 The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 DNA

This sequence encodes the human RICK (RIP-like interacting CLARP kinase)

C f apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10

during CD95 signalling. The invention provides methods for identifying

apoptosis signalling pathway inhibitors and activators, and methods and

c compositions for screening compounds which will modulate the interactions

CC compositions for screening compositions identified: ARC, RICK, and the CIDB family of

activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening

CC assays for agents, useful in the diagnosis, prognosis or treatment of

cisease associated with excess cell growth and dysregulation of

cassays for agents, useful in the diagnosis, prognosis or treatment of

cisease associated with excess cell growth and dysregulation of

compositions of an electric molecules blocking CD95-mediated

confortification of ARC-like inhibitory compounds may be useful for gene

ct of identify inhibitors of the enzymatic activity of caspase-8.

CC Identification of ARC-like inhibitory compositions of CIDEs can be used to

therapy treatment of disease with increased cell death in muscle tissue

can dead an essential screen induced liver disease. AntirRICK antibodies

can be used as reagents for the preparation or affinity chromatography

cc an essential step in the biochemistry of apoptosis is needed. RICK

interaction with intracellular factors such as CLARP and FADD appears to

conform of the programmial and for dispersive and and active and be used to be essential for apoptosis.

CC interaction with intracellular factors such as CLARP and FADD appears to

conform be used as reagent and for dispersive and an essential step in the biochemistry of apoptosis is needed. RICK

conformation with intracellular factors such as CLARP and FADD appears to

conformation with intracellular dispersive and the conformation of RICK binding to intracellular.
 Compositions for identifying apoptosis signaling pathway inhibitors
 apoptosis factors are potential drug candidates

 630
 The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly

 New B1 protein regulates cell death and cell survival pathways -derivatives, DNA and antibodies, also regulate intracellular inflammation; for treating AIDS, cancer.
 This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above

New human kinases and phosphatases and polynucleotides, useful for diagnosing, treating or preventing autoimmune or inflammatory disorders (e.g. AIDS, allergy or anemia), multiple sclerosis, osteoarthritis, cancer or hepatitis.

1275 480 540 TATGAAGCTGCATCACTGTCCTGGAAATCACAGTTGGGATAGCACCATTTCTGGATCTCA 600 The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The KPP polypeptides, polymucleotides, agonists and antagonists are useful for diagnosing, treating or preventing cell proliferative disorders such as atherosclerosis, cirrhosis, hepatitis and cancer, developmental disorders e.g. mental retardation, neurological disorders including Alzheimer's disease and Parkinson's disease, autoimmune and inflammatory disorders such as Crohn's disease and diabetes mellitus and finally, viral, bacterial, fungal, parasitic, protozoan or helminthic infections. Furthermore, the polymucleotides encoding KPP may be useful for creating transgenic animals to model human disease, as well as during gene therapy GTCCCTGCCAGCTCCTCAAGACAATGATTTTTTATCTAGAAAAGCTCAAGACTGTTATTT AGAGGAATCATGTGGATCCTCTCAGCTCCATGAAAATAGTGGTTCTCCTGAAACTTCAAG GTCCCTGCCAGCTCCTCAAGACAATGATTTTTTATCTAGAAAAGCTCAAGACTGTTATTT procedures. The present sequence is that of cDNA encoding human caspase recruitment domain 3 (CARD-3, see AAB20079). The CDNA was isolated following a database search using known CARD sequences. Plasmid pxE17A containing CARD-3 cDNA is deposited as ATCC 203037. CARD-3 is an intracellular protein predicted to be involved in regulating caspase activation. It is useful as a modulating agent in regulating callular processes include cell growth and cell death. Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death. Abnormal activity of the Fas/ADO-1 receptor complex, abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of the cumour administering a compound that modulates the expression or activity of CARD-3. CARD-4. CARD-5 or CARD-6 e.g. a small molecule, antisense nucleic acid, ribozyme or polypeptide. Such disorders include cancer, viral infection, autoimmune disorders, neurological diseases, haematological disorders, inflammatory disorders and immune disorders. CARD nucleic acids can be used to express CARD proteins in a host cell e.g. for gene therapy applications, to detect a genetic lesion and to modulate CARD activity

 The invention relates to identifying (M1) a compound which modulates a human or murine caspase recruitment domain (CARD)-4L (long form) polypeptide with a by contacting the polypeptide with a test compound and determining the effect of the test compound on the activity of the polypeptide to identify a compound which modulates the polypeptide. The method may be adapted for identifying a compound which binds to the LRR (leucine rich repeat) domain of CARD-4. Also included is a method of identifying a candidate compound for modulating LPS (lipopolysaccharide)-

The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-41 and CARD-45. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly follicular lymphomas, carcinomas associated with mutations in p53, and covarian cancer), autoimmune disorders (such as systemic lupus erythematosus, immune-mediated glomerulonephritis), viral infections erythematosus, immune-mediated glomerulonephritis), viral infections (such as those caused by herpes viruses, posturases, and adenoviruses), neurological diseases (such as Alzheimer's disease, Parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of cerebellar degeneration), anaemia and the myelodysplastic syndromes. This polynuclectide sequence ceresents the cDNA of a human CARD relating to the invention
 Isolated Caspase Recruitment Domain (CARD) polypeptides (CARD-4L and CARD-4S) useful for diagnosing and treating e.g. Parkinson's and Alzheimer's disease, cancers and viral infections.

 The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, human CARD-4Z or murine CARD-4L (all splice variants of CARD-4)

CONTIGUOUS amino CARD-4L (all splice variants of CARD-4)

polypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide covalently linked by a peptide bond to a heterologous colypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, detection display medicine (e.g. diagnostic assays, prognostic assays, conjudy), predictive medicine (e.g. diagnostic assays, prophylactic treatments (in diseases associated with apoptotic call death comply actic treatments (in diseases associated with apoptotic call death comply actic treatments (in diseases associated with apoptotic call death cimmunodeficiency syndrome), neurological disease (e.g. systemic lupus erythematosus and immunodeficiency syndrome), neurological disease (e.g. Alzheimer's disease, mayotrophic lateral sclerosis, retinitis disease, parkinson's disease, amyotrophic lateral sclerosis, retinitis disease, myocardial infaction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD proteins. Also disclosed are CARD-3 proteins and construction or interact with other CARD constructions and mayon or interact with other CARD construction or mayon or interact with other CARD constructions.

This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RIP2, RICK and CARDIAK) is known to be a mediator.

CARD-3 (also known as RIP2, RICK and CARDIAK) is known to be a mediator.

CARD-4 (also known as RIP2, RICK and CARDIAK) is known to be a mediator.

CO FD75 (a member of the tumour necrosis factor (TNF) family), and is mediated to provide the switch for cell survival and cell death decisions mediated by this p75 neutrophin receptor. Accordingly these genes, and the proteins encoded thereof, are linked to certain disorders associated with an increased number of cells surviving and proliferating when apoptosis is inhibited. These include cancer, autoimmune disorders e.g. systemic lupus and immune mediated glomerulonsphritis, viral infections such as those caused by the herpesvirus, neurological disorders such as retinitis pigmentosa, haematologic diseases including chronic neutropenia, as well as myocardial infarction and strokes. The present invention further describes a novel method for determining whether a test compound alters the binding of CARD-3 to p75, which comprises measuring the binding of a polypeptide containing the CARD domain of CARD-3 to a polypeptide comparising the death domain of p75 in the presence and absence of the test compound, and determining if binding is altered. This polymention. 1629 GGACTAIGAACTIGITAGTACCAAGCCTACAAGACCTCAAAAGTCAGACAATTACTAGA 1688 CACTACTGACATCCAAGGAGAAGAATTTGCCAAAGTTATAGTACAAAAATTGAAAGATAA 1748 1449 recargererreageaaraaraarecaerereraacigeaggaaaerecagaaceregea 1508 1509 GCCTGGTATAGCCCAGCAGTGGATCCAGAGCAAAAGGGAAGACATTGTGAACCAAATGAC 1568 1569 AGAAGCCTGCCTTAACCAGTCGCTAGATGCCCTTCTGTCCAGGGACTTGATCATGAAGA 1628 1149 AAAGTTACAGAGTGTTTCAAGTGCCATTCACCTATGTGACAAGAAAAATGGAATTATC 1208 GGACTATGAACTTGTTAGTACCAAGCCTACAAGGACCTCAAAAGTCAGACAATTACTAGA 870 CACTACTGACATCCAAGGAGAAATTTGCCAAAGTTATAGTACAAAAATTGAAAGATAA 930 CAAACAAATGGGTCTTCAGCCTTACCCGGAAATACTTGTGGTTTCTAGATCACCATCTTT 990 331 ACAGTTACAGAGTGTTTCAAGTGCCATTCACCTATGTGACAAGAAAAAGGAATTATC TGAAAATAGTGGTTCTCCTGAAACTTCAAGGTCCCTGCCAGCTCCTCAAGACAATGATTT TITATCTAGAAAAGCTCAAGACTGTTATTTATGAAGCTGCATCACTGTCCTGGAAATCA CAGTTGGGATAGCACCATTTCTGGATCTCAAAGGGCTGCATTCTGTGATCACAAGACCAC TCCATGCTCTTCAGCAATAATAAATCCACTCTCAACTGCAGGAAACTCAGAACGTCTGCA GCCTGGTATAGCCCAGCAGTGGATCCAGAGCAAAAGGGAAGACATTGTGAACCAAATGAC AGAAGCCTGCCTTAACCAGTCGCTAGATGCCCTTCTGTCCAGGGACTTGATCATGAAAGA TCTGAACATACCTGTAAATCATGGTCCACAAGAGGAATCATGTGGATCCTCTCAGCTCCA 0; Gaps 43.8%; Score 731.8; DB 9; Length 1931; 99.7%; Pred. The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, human CARD-4E of mutine CARD-4E (all splice variants of CARD)-49, polypeptide. Also included is an isolated fusion protein, comprising the polypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide is useful in screening assays, polypeptide. The CARD polypeptide is useful in screening assays, biology, predictive medicine (e.g. diagnostic assays, prognostic assays, pology), predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic cell death e.g. cancers, autoimmune disorders (e.g. systemic lupus erythematosus and immune related glomerulonephritis), viral infections, AIDS (acquired immune florency syndrome), neurological disease (e.g. Alzheimer's pigmentosa, spinal muscular atrophy and cerebellar degeneration), haematological diseases (e.g. anaemia, neutropaenia and myelodysplastic syndromes), myocardial infarction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD amyotrophic lateral sclerosis; retinitis pigmentosa; spinal muscular atrophy; cerebellar degeneration; haematological disease; anaemia; neutropaenia; myelodysplastic syndrome; myocardial infarction; Novel isolated human caspase recruitment domain (CARD)-4Y or CARD-4Z polypeptide, or murine CARD-4L polypeptide, useful in screening assays, detection assays, predictive medicine, and in therapeutic applications. CARD-4L, CARD-4S, CARD-4Y, CARD-4Z, apoptosis, cancer, AIDS, autoimmune disorder, systemic lupus erythematosus, viral infection; immune related glomerulonephritis, acquired immunodeficiency syndrome, neurological disease, Alzheimer's disease, Parkinson's disease, AAATTTACTTCAAAATAAAAGCATGTAAGTGACTGTTTTTCAAGAAAAATGTGTTTCAT gene; caspase recruitment domain; CARD; CARD-3; CARD-4; Human Caspase recruitment domain protein 3, open reading frame. with a modified polylinker; Site 1: EcoR I; Site 2: Not I;
NCI_CGAP_Chl is a cDNA library containing the following
tissue(s): Chondrosarcoma Grade II. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oilgo-df primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
modified that the sequence tag for this library is

/note="Organ: Left Public Bone; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: ECOR I; Site 2: Not I; NCI CGAP EDI is a normalized cDNA library containing the following tissue(s): Chondrosarcoma cell line CS5. The library was constructed according to Bonaldo, Lennan and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GCTCAAGGCT.

Title:

Run on:

Claim 6; Page; 93pp; English. 

This sequence is a fragment of the human RICK (RIP-like interacting CLARP kinase) protein of the invention. RICK acts as a positive regulator of apoptosis, protein of the invention. RICK acts as a positive regulator of apoptosis, protein apoptosis induced by caspase-8 and caspase-10 during CD95 signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions in dentified ARC, RICK, and the CIDE family of activators (CIDE-A, USE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Overspression of ARC in an in vitro cell system can be used to carening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overspression of ARC in an in vitro cell system can be used to carening assays to identify inhibitory compounds may be useful for gene therapy treatment of disease with increased cell death in muscle tissue can cardiac disorders. Therapeutic compositions of CIDEs can be used as reagents for the preparation or affinity chromatography can be used as reagents for the preparation or affinity chromatography can be used as reagents for the preparation or affinity chromatography can be used as reagents for the preparation or affinity chromatography can essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and PADD appears to che essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates. Note: This sequence was considered using information given in the specification

protein of the invention. The RICK protein acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions
 an essential step in the biochemistry of apoptosis is needed. RICK teraction with intracellular factors such as CLARP and FADD appears to essential for apoptosis, inhibitors of RICK binding to intracellular.
 of the various compositions identified: ARC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the displacis, prognosis or treatment of disease associated with excess cell growth and dysregulation of disease. Complexes containing RICK and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vitro cell system can be used
 186-8; caspase-10; CD95 signalling; apoptosis signalling pathway; A; CIDE-B; DREP-1; diagnosis; cell growth; apoptosis dysregulation; therapy; cardiac disorder; cancer; neurodegenerative disorder; AIDS;
 and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anamia, ischaemic injury, and toxin induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography
 to identify inhibitors of the enzymatic activity of caspase-8. Identification of ARC-like inhibitory compounds may be useful for gene therapy treatment of disease with increased cell death in muscle tissue

New B1 protein regulates cell death and cell survival pathways -derivatives, DNA and antibodies, also regulate intracellular inflammation; for treating AIDS, cancer.
 This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as A1DS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above

 AAY68769-95 and AAY68797-99 represent human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP expression/activity PHSP with increased PHSP expression/activity

 The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA assily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM

The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 protein
 New antisense oligonucleotide that targets regions of a nucleic acid encoding human receptor interacting protein (RIP)2, for treating diseases associated with RIP2 expression.

 for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, Nck-Interacting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present amino acid sequence represents the human cellular kinase RICK protein of the invention, as described above

This invention describes the isolation of novel human caspase recruitment domain, CARD-3 and CARD-4 polynucleotides and proteins and a partial curine CARD-4 protein and genes. The genes and proteins of the invention are involved in the regulation of caspase activation. The caspase cartinoldies can be used in screening assays, detection assays, predictive antibodies can be used in screening assays, polypeptides, homologues and medicine and therapeutic and prophylactic methods of treatment. The medicine may be used to diagnose and treat patients which are suffering from a disorder associated with abnormal level or rate of apoptotic cell death, abnormal activity of the TMF receptor complex, abnormal activity of the TMF receptor complex, abnormal activity of the TMF receptor complex, or abnormal activity of a caspase. Implement may be treated include cancer (particularly follicular complex associated with mutations in p53 and hormone-compendent tumours), autoimmune disorders (e.g. systemic lupus cappendent pagenetosa, spinal muscular dystrophy, cerebellar degeneration, anaemia, myelodysplastic syndrome, myocardial infarction, and stroke. CARD-3 protein interacts with other cellular proteins, and so can be used for regulation of cellular proliferation and differentiation and cellular proliferation and differentiation and compounds which modulate their activity. The CARD-4 gene can express a compounds which modulate their activity. The CARD-4 gene can express a compounds which modulate their activity. The CARD-4 gene can express a compounds which modulate their activity. The CARD-4 gene can express a compounds which modulate their activity. The CARD-4 and CARD-4. This sequence compounds which will be about transcript that encodes CARD-4 and CARD-4 and CARD-4. The represents the human CARD-4 spice at the page of the cappendent expre

The present sequence is that of human caspase recruitment domain 3 (CARD-3), an intracellular protein predicted to be involved in regulating caspase activation. The sequence is predicted from an isolated CDNA clone (see AAF30001). Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the Fas/APO-1 receptor complex, abnormal activity of a caspase involve administering a compound that modulates the activity of a caspase involve administering a compound that modulates the expression or activity of CARD-3. CARD-5 or CARD-6 e.g. using cartivity of a caspase involve administering a compound that modulates the expression or activity of disorders include cancer, viral infection, cautoimmune disorders, neurological disorders, haematological disorders, inflammatory disorders and immune disorders. CARD-3, -4, -5 and -6 or proteins can be used to regulate cell proliferation, cell survival and cell growth. They can also be used to screen drugs or compounds that. Cell growth. They can also be used to screen drugs or compounds that. Cell modulate their activity or expression and to treat disorders associated with insufficient or excessive production of CARD-3, -4, -5 or -6 or protein, or production of an aberrant protein

The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-4L and CARD-4S. The CARD proteins of the invention may polypeptides, CARD-4L and CARD-4S. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly follicular lymphomas, carcinomas associated with mutations in p53, and covarian cancer, autoimmune disorders (such as systemic lupus erythematosus, immune-mediated glomerulonephritis), viral infections, eurological diseases by herpes viruses, parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of carebellar degeneration), anaemia associated with chronic disease, aplastic anaemia, chronic neutropenia, and the myelodysplastic syndromes. This sequence represents a human CARD protein relating to the invention

 The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-47, human CARD-42 or murine CARD-4L (all splice variants of CARD-4) comprising the collaboration of the comprising the polypeptide. Also included is an isolated fusion protein, comprising the collaboration of the case of CARD polypeptide is useful in screening assays, compressing the collaboration polypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, controling claim and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic call death comproming claim and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic call death communodeficiency syndrome), neurological disease (e.g. systemic lupus erythematosus and immunodeficiency syndrome), neurological disease (e.g. Alzheimer's disease, parkinson's disease, amyotrophic lateral sclerosis, retinitis collaboration and stroke). The CARD polypeptide is sueful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD proteins. Also disclosed are CARD-3 proteins and cDNAS. The gene for human CARD-4 is located on chromosome 7. The present sequence is a human human CARD-4 is located on chromosome 7. The present sequence is a human hand a service of the card of the ca

 This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RIP2, RICK and CARDIAK) is known to be a mediator of p75 (a member of the tumour necrosis factor (TNF) family), and is

mediated by this p75 neutrophin receptor. Accordingly these genes, and the provide the switch for cell survival and cell death decisions mediated by this p75 neutrophin receptor. Accordingly these genes, and the process of the proteins encoded thereof, are linked to certain disorders associated with an increased number of cells surviving and proliferating when apoptosis is inhibited. These include cancer, autoimmune disorders e.g. systemic lupus and immune mediated glomerulomephitis, viral infections such as those caused by the herpesvirus, neurological disorders such as retinitis pigmentosa, haematologic diseases including chronic retinitis pigmentosa, haematologic diseases including chronic invention further describes a novel method for determining whether a test compound alters the binding of CARD-3 to p75, which comprises measuring the binding of a polypeptide containing the CARD domain of CARD-3 to a polypeptide comprising the death domain of p75 in the presence and pabence of the test compound, and determining if binding is altered. This polypeptide is the human CARD-3 protein sequence of the invention.

 receptor complex.

SUBCELLULAR LOCATION: Cytoplasmic (Probable).

TISSUE SPECIFICITY: Detected in heart, brain, placenta, lung, peripheral blood leukscytes, spleen, kidney, testis, prostate, pancreas and lymph node.

FTM: Autophosphorylated.

SIMILARITY: Belongs to the Ser/Thr family of protein kinases.

SIMILARITY: Contains 1 CARD domain.

Receptor-interacting serine/threonine protein kinase 2 (EC 2.7.1.37)
 FUNCTION: Activates pro-caspase-1 and pro-caspase-8. Potentiates
 CASP-8-mediated apoptosis. Activates NF-kappaB (By similarity).
CASP-8-mediated apoptosis. Activates NF-kappaB (By similarity).
CAYTALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
SUBUNIT: Binds to CLAR/CLARP and CASP1 via their CARD domains
Binds to BIRC3/c-1AP1 and BIRC2/c-1AP2, TRAF1, TRAF2, TRAF5 and
TRAF6. May be a component of both the TNFRSF1A and TNRFSF5/CD40
receptor complex (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic (Probable).
FTM: Autophosphorylated (By similarity).
SIMILARITY: Belongs to the Sar/Thr family of protein kinases.

Inhuman Nod1 confers responsiveness to bacterial lipopolysaccharides.";
J. Biol. Chem. 276:2551-2554(2001).
-!- FUNCTION: Enhances capase-9-mediated apoptosis. Induces NF-kappa-B activity via RICK (CARDIAK, RIP2) and IKK-gamma. Confers responsiveness to intracellular bacterial lipopolysaccharides
 SUBUNIT: Self-associates. Binds to caspase-9 and RICK by CARD-CARD
 interaction.
SUBCELULIAR LOCATION: Cytoplasmic.
TISSUB SPECIFICITY: Highly expressed in adult heart, skeletal muscle, panoreas, spleen and ovary. Also detected in placenta, lung, liver, kidney, thymus, testis, small intestine and colon. SIMILARITY: Contains 1 CARD domain.
SIMILARITY: Contains 1 NACHT domain.
SIMILARITY: Contains 9 leucine-rich (LRR) repeats.

GO; GO:0007166; P:cell surface receptor linked signal transdu. . .; TAS.
InterPro; IPR001370; BIR.
 FUNCTION: APPPTOTIC SUPPRESSOR. THE BIR MOTIFS REGION INTERACTS WITH THE RECEPTOR ASSOCIATED FACTORS 1 AND 2 (TRAFI AND TRAF2) TO FORM AN HETEROMERIC COMPLEX, WHICH IS THEN RECRUITED TO THE TUMOR NECROSIS PACTOR RECEPTOR 2 (TWFR2).

SUBGINIT: INTERACTS WITH SMAC and With PRSS25; these interactions inhibit apoptotic suppressor activity.

SUBCELLUAR LOCATION: Cyrolsamic (Potential).

TISSUE SPECIFICITY: PRESENT IN MANY FETAL AND ADULT TISSUES.

MAINLY EXPRESSED IN ADULT SKELETAL MUSCLE, THYMUS, TESTIS, OVARY.

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its modified non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce) or send an email to license@isb-sib.ch).
 PUNCTION: Involved in the maintenance of nuclear organization and structural integrity. Probable anchoring protein which therers the nucleas to the cytoskeleton. Connects nuclei to the cytoskeleton by interacting with the nuclear envelope and with F-actin in the cytoplasm.
SUBUNIT: Interacts with MUSK, with F-actin via its N-terminal domain, and with LMMA in vitro (By similarity).
SUBCELDIAR LOCATION: Type IV membrane protein (Potential) The largest part of the protein is cytoplasmic, while its C-terminal part is associated with the nuclear envelope, most probably the outer nuclear membrane. In skeletal and smooth muscles, a
 CAUTION: Ref.7 (BAB71097) sequence differs from that shown due to a chimeric cDNA.
 VSP_007139, VSP_007140,
 SIMILARITY: Belongs to the nesprin family.
SIMILARITY: Contains 1 actin-binding domain.
SIMILARITY: Contains 2 calponin-homology (CH) domains.
SIMILARITY: Contains 1 HAT repeats.
SIMILARITY: Contains 1 Klarsicht domain.
SIMILARITY: Contains 1 Klarsicht appeats.
CAUTION: Ref. 5 (CAB55865, CAB5866, CAUTION: Ref. 5 (CAB55865, CAUTION: Ref. 5 (CAB
 DOMAIN: The Klarsicht domain, which contains a transmembrane
 CAUTION: Ref.14 sequence differs from that shown due to two frameshifts in positions 8412 and 8784.
 (JAN-1998) to the EMBL/GenBank/DDBJ databases.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

Compositions for identifying apoptosis signaling pathway inhibitors useful for treating diseases.

Claim 8; Fig 7b; 93pp; English.

This sequence encodes the human RICK (RIP-like interacting CLARP kinase)

protein of the invention. The RICK protein acts as a positive regulator

C apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10

during CD95 signalling. The invention provides methods for identifying

apoptosis signalling pathway inhibitors and activators, and methods and

CC compositions for screening compounds which will modulate the interactions

CC compositions for screening compounds which will modulate the interactions

of the various compositions identified: ARC, RICK, and the CIDE family of

activators (CIDE-A, CIDE-B and DREPL). RICK is useful in screening

assays for agents, useful in the diagnosis, prognosis or treatment of

disease associated with excess cell growth and dysregulation of

assays for agents, useful in the diagnosis, prognosis or treatment of

disease associated with excess cell growth and dysregulation of

assays to identify inhibitors molecules blocking CD95-mediated

apoptosis. Overexpression of ARC in an in vitro cell system can be used

to identify inhibitors of the enzymatic activity of caspase-8.

CC Identification of ARC-like inhibitory compounds may be useful for gene

therapy treatment of disease with increased cell death in muscle tissue

can cardiac disorders. Therapeutic compositions of CIDEs can be used to

treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia,

cc treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia,

cc an essential step in the blochemistry of apoptosis as needed. RICK

contraction with intracellular factors such as CLARP and FADD appears to

be essential for apoptosis, inhibitors of RICK binding to intracellular

apoptosis factors are potential drug candidates

 New B1 protein regulates cell death and cell survival pathways -
derivatives, DNA and antibodies, also regulate intracellular inflammation
; for treating AIDS, cancer.
 This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above

Key

/product= "CARD-3"

WO9940102-A1

This invention describes the isolation of novel human caspase recruitment domain, CARD-3 and CARD-4 polymuclectides and proteins and a partial murine CARD-41 protein and genes and proteins of the invention are involved in the regulation of caspase activation. The caspase cretification in the regulation of caspase activation. The caspase crecinitment domain (CARD) polymuclectides, polypeptides, homologues and rectinited and therapeutic and prophylactic methods of treatment. The methods may be used to diagnose and treat patients which are suffering from a disorder associated with abnormal level or rate of apportotic cell death, abnormal activity of the Fas/APO-1 receptor complex, abnormal activity of the TMF receptor complex, or abnormal activity of the ray be treated fuclude cancer (particularly follicular curvity of the TMF receptor complex, or abnormal activity of a caspase. Diseases that may be treated fuclude cancer (particularly follicular compendent tumours), autoingmune disorders (e.g. systemic lupus capthematosis, immune-mediated glomerulonephitis), viral infections, capthematosis, immune-mediated glomerulonephitis), viral infections, cretinitis pigmentosa, sprinal muscular dystrophy, cerebellar degeneration, and stroke. CC CARD-3 protein interacts with other cellular proteins, and so can be used for regulation of cellular proliferation and differentiation and cell survival. The CARD proteins may also be used to for screen drugs or survival. The CARD proteins may also be used to for screen drugs or survival that encodes CARD-41, a short transcript that encodes CARD-44 splice variants, CARD-47 and CARD-32 This sequence compounds which modulate their activity. The CARD-49 species and caption of caption described in the method of the invention condes the human CARD-3 protein described in the method of the invention Novel CARD-3 and CARD-4 genes and polypeptides used or treating regulation of cellular proliferation and differentiation and cell survival. ; 0 Score 1864; DB 4; Length 1931; Pred.  Clone CTA-437115 is from a release of the human BAC library CITB-HS-A. The library contains cloned DNA from human sperm. See: Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). The clone is available from Research Genetics, Inc. (http://www.resgen.com).
 NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
 This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
 NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is CTA-237G1. The actual start of
this clone is at base position 1 of CTA-437L15; actual end is at
116650 of CTA-437L15.
 This chromosome 8 clone was provided by Dr. Patrick Concannon (patcon@vmmc.org) at the Virginia Mason Research Institute.
 1100---8040
note="CpG_island (%GC=69.1, o/e=0.80, #CpGs=93)"
 This clone contains STS HS275YF1 (NID:g1051703).
